Midterm Reflection

1) I earned a 100% on the exam, showing a firm understanding of all topics tested. While I was taking the exam, I felt confident about all of the material and didn't have to mark anything to go back to. I was able to think about code on the fly, as proven by the written for and while loops. The loops I wrote show my understanding of sifting through vectors and being able to use multiple indices in one loop. I put in extra time outside of class understanding polyval and polyfit, as shown by my performance on problem 7. I understood the task at hand and completed it confidently. My understanding of the breadboard was also tested and I showed both the grader and myself that I can effectively navigate the wiring on the breadboard. The work I have put in outside of class and in the lab was accurately reflected by my midterm grade, and I feel more than happy about how I performed.

2) This question does not apply to me as there were no mistakes on my exam. **I got 100% and there is nothing to correct.**
